## **PROSTEEL EARNS PRESTIGIOUS ISO CERTIFICATION**

The Quality Management System used by ProSteel & Manufacturing, a division of ProEnergy Services, has been certified under the ANSI/ISO/ASQ Q9001:2008 Quality Standards.

ISO standards serve as a systems management model that promotes increased productivity, performance, customer satisfaction and employee pride in the organization and the work they do. This system has proven benefits in reducing waste, rework, redundancy, overall cost and customer-ordered audits. Through ISO, ProSteel benefits from a more orderly method of doing business, while establishing an edge over suppliers that do not have a certified system in place. ISO standards help ensure ProSteel's commitment to complying with customer and regulatory requirements as well as continuing to provide superior products and services.

"We are very proud of our entire team who work everyday to continuously improve ProSteel," said John Spilker, Director of ProSteel & Manufacturing.

ProEnergy is an integrated service provider that delivers safe, reliable solutions to industrial and energy clients throughout the world and close to home. The company has U.S. offices in Sedalia, MO; Houston, TX; and Tulsa, OK and overseas locations in Mexico, Panama, Venezuela, Argentina, Brazil, Ghana and Pakistan.
